

C1 SmartRequest for DACM

Configurable ATO Workflow Engine

SmartRequest for DACM replaces email and Flow Designer-based ATO coordination with a governed, metadata-driven request engine using OSCAL-aware task assembly inside SmartDACM.

THE IMPACT

Faster

Authorization Cycles

Less

Rework & Clarification

Higher

Completeness & Consistency

■ Key Use Cases

- SSP inputs with consistent SME submissions
- Evidence requests with standardized tasks reducing rework
- POA&M updates with enforced metadata accuracy
- Assessor clarifications with structured prompts
- ConMon data calls with faster monthly reporting

■ Measurable Outcomes

- Faster authorization cycles across all programs
- Less rework and clarification rounds
- Reduced Flow Designer maintenance burden
- Higher completeness and consistency of submissions
- Repeatable, audit-ready ATO workflows

Dynamic SmartChecklists

OSCAL-aware task assembly with automatic validations for all authorization requests and submission workflows.

No-Code Configuration

Authorization teams update workflows independently with standard routing and governance rules without developers.

AI-Enhanced Intake

Optional AI clarifies inputs and checks evidence completeness before submission to reduce rework and clarification.

KEY USE CASES

- Replacing email-based ATO coordination with governed, OSCAL-aware request workflows
- Consistent SSP and evidence submissions using dynamic SmartChecklists with validations
- No-code workflow configuration letting authorization teams manage processes independently
- AI-enhanced intake checking evidence completeness before submission to reduce rework

Why C1Secure

OSCAL-Aware Workflows

Tasks, routing, and validations assembled automatically using OSCAL metadata for consistency.

No-Code Governance

Authorization teams configure workflows without developers, reducing Flow Designer dependency.

DACM Model Sync

Automatic synchronization to SSP, Evidence, POA&M, and Assessment models with full audit history.

Governed ATO coordination with OSCAL-aware task automation.

Included with SmartRequest for DACM; scales by authorization package volume.
