

C1 SmartStart for Application Vulnerability Response

DevSecOps Vulnerability Management on ServiceNow

Rapid deployment of ServiceNow AVR integrating scanners, automating workflows, enabling risk-based remediation, and syncing tasks to developer tools for shift-left security.

THE IMPACT

40-60%

MTTR Reduction

60-80%

Less Manual Work

50-70%

SLA Improvement

■ Core Capabilities

- Scanner integrations (SAST/DAST/SCA/container)
- Traceability to apps, repos, commits, and owners
- Automated ticket creation with bi-directional sync
- Exception and risk acceptance workflows
- Compliance mapping (ISO, PCI, HIPAA, CMMC)

■ Primary Use Cases

- Shift-left vulnerability detection in the SDLC
- Automate DevSecOps workflows end-to-end
- Prioritize vulnerabilities by real exploitability and risk
- Govern exceptions with structured approval workflows
- Provide SDLC posture visibility for AppSec leaders

Centralized Intake

SAST, DAST, SCA, and container scanner tools feed into one unified platform for consistent vulnerability management.

Risk-Based Scoring

Prioritize by exploitability and application criticality so teams fix what matters most, not just what's loudest.

Automated Sync

Tickets flow to Jira, ADO, and GitHub automatically with bi-directional sync keeping developers in their tools.

KEY USE CASES

- Centralizing vulnerability intake from SAST, DAST, SCA, and container scanners
- Automating DevSecOps workflows with bi-directional sync to Jira, ADO, and GitHub
- Risk-based prioritization by exploitability and application criticality
- SDLC posture visibility with compliance mapping across ISO, PCI, HIPAA, and CMMC

Why C1Secure

Developer-Aligned

Bi-directional sync keeps devs in Jira/ADO/GitHub while AppSec manages governance in ServiceNow.

Risk-Based Priority

Exploitability and app criticality scoring ensures teams fix what matters most first.

Compliance-Ready

Built-in mapping to ISO, PCI, HIPAA, and CMMC for audit-ready vulnerability governance.

Embed security directly into the SDLC with ServiceNow AVR.

Pricing based on scanner volume, DevOps integrations, and application portfolio size.
