C1 SmartSystem Decomm
Dynamic, Compliance-Aligned System Retirement

SmartSystem Decomm transforms system retirement into a governed, repeatable, no-code workflow. Powered by SmartRequest, it dynamically generates tasks, approvals, and evidence steps.

THE IMPACT

Faster
Consistent System Retirement

Reduced
Compliance & Audit Risk

Complete
Defensible Documentation

■ Key Outcomes

- Faster, consistent system retirement workflows
- Reduced compliance and audit risk during decommission
- Clear ownership and accountability across teams
- Complete, defensible documentation for auditors
- Scalable governance across all system types

■ Ideal For

- Compliance and GRC teams managing system retirement
- Security and cloud governance leaders
- System owners and platform teams
- FedRAMP and regulated organizations
- Organizations replacing ad hoc checklists with governance

SmartRequest-Powered

No-code workflow orchestration with context-aware task assembly and role-based ownership across teams.

Compliance-Aligned

Boundary alignment before closure with automatic evidence capture and IRM-native governance foundation.

Cloud & Hybrid Ready

Regulated cloud decommissioning that removes systems cleanly from compliance scope across all environments.

KEY USE CASES

→ Governed system retirement replacing ad hoc checklists with dynamic, compliance-aligned workflows
→ Boundary alignment and evidence capture before system closure in regulated environments
→ Cloud and hybrid decommissioning that cleanly removes systems from compliance scope
→ Scalable retirement governance across on-prem, cloud, and hybrid system types

Why C1Secure

◆ No-Code Governance

Powered by SmartRequest for dynamic, configuration-driven retirement workflows.

■ Compliance-First Design

Boundary alignment, evidence capture, and audit trails built into every retirement step.

■ Any Environment

On-prem, cloud, and hybrid systems all governed through a single repeatable workflow.

Governed, repeatable system retirement with full audit trails.

SmartRequest application for SmartDACM or standalone decommissioning workflows.
